COMMONWEALTH OF PENNSYLVANIA

NINTH ANNUAL STATISTICAL REPORT

of the

Department of Welfare

S. M. R. O'HARA
Secretary

1943

35

Bulletin No. 86 **Mental Health** **Section A**

This section of the Annual Report again presents statistical tables on data received from 19 Mental Hospitals and 4 Institutions for the Mentally Deficient and Epileptics.

The increase in population of the Mental Hospitals during the past year has been less than the increase in previous years. A greater number of persons have been placed on parole but the hospitals still continue to show much overcrowding.

Selective Service and private industry have subtracted from the staffs and personnel. This has created many problems for the management of our hospitals. The Boards of Trustees, Superintendents, staff and personnel have met these problems with great resourcefulness, and a devotion to duty that earns our highest commendation.

Some activities have had to be reduced or even discontinued for the duration of the war. But it is hoped they may soon be resumed.

S. M. R. O'Hara

Secretary of Welfare

L324503

THE BUREAU OF MENTAL HEALTH

The etatistical compilations in regard to mental patiente in Penneylvania for the year ending May 31, 1943, again constitute Section A of the Ninth Annual Statistical Report of the Department of Welfare. The further application of the Complete State Care Act has reeulted in coneolidation of the etatistice by eliminating a separate classification for county inetitutione which have been discontinued. Some explanation, however, is in order at the time of the writing of thie comment (May 31, 1944), especially in regard to the lieting of the inetitutions and their heads.

With the paeeage of the Complete State Care Act, all the patients, including those in county institutions etill remaining, the final disposition of which had not been decided, were eupported entirely by the Commonwealth. Prior to May 31, 1943, for inetance, the Blakely Hospital at Olyphant continued to house patiente but under a limited licenee. The patiente have eince been removed from Blakely and Traneferred to the Clarks Summit State Hospital. The eo-called Blakely State Hospital therefore no longer exists. A final decieion has not yet been reached as to the disposition of one or two of the other smaller hospitale which were formerly County institutions.

As in former reports, the tablee preeented at thie time do not by any means repreeent all the available information in the Department of Welfare concerning mental patiente. Through mechanical tabulation of the coded and punched carde of individual patients, almoet any combination of etatietical data is poseible. The tables eelected for publication are those believed moet likely to illuetrate the extent of the problem in Pennsylvania and make it poseible to compare eimilar activitiee in other states.

The table ehowing the percentage of occupancy in State inetitutions graphically illuetrates the neceseity for further expansion and the

desirability for a comprehensive building program for the future. It is again noted that the closing of certain County institutions has resulted in greater overcrowding, as the patients needing further treatment had to be transferred to existing State hospitals. As a result, a considerable portion of the increased bed capacity made available by the last extension building program has now been filled.

Attention is again directed to the County institutions taken over for State hospital purposes. They are crowded, are lacking in certain essential facilities and, in the case of several very small places, have little to offer except a type of custodial care. Therefore, these small institutions if retained by the Commonwealth, require extensions and additional facilities before they may rightly be called hospitals. Furthermore, they cannot be efficiently or economically conducted as such small places.

Since the last report, three new buildings have been completed at the Philadelphia State Hospital and are now in process of being occupied. These buildings are well planned and substantial structures, with a total capacity of about 1500. Plans are available for further needed extensions at Philadelphia and other hospitals, at the State Schools for mental defectives and at Selinegrove, whenever it becomes possible to resume building operations. Such a building program should appeal to all interested in the welfare of mental patients, also as a basis for a post war program.

There has been a smaller net increase in the patient population of the State hospitals, at least partly to be explained by an increase in the number of patients on parole and fewer admissions. Efforts are being made to avoid unnecessary commitments especially in the senile period.

The psychiatric diagnoses of 5511 first admissions to the State

Mental Hospitals (see table Number II) are interesting because they illustrate the relative frequency and, in comparison with other years, the trends of various conditions. The following diagnostic groupings are listed as of 1943 for comparison with 1940, 1941 and 1942.

	1943	1942	1941	1940
Dementia Praecox	25.4	24.3	24.3	25.2
Syphilitic Meningo-encephalitis	8.8	8.8	9.6	9.8
Senile	14.6	12.4	9.9	9.4
Manic-Depreseive	8.3	9.6	7.2	8.8
Cerebro arteriosclerosis	11.2	11.1	10.5	7.6

There continues to be considerably more men than women admitted to the mental hospitals.

The table "Age Groups of First Admissions to Mental Hospitals" again merits attention. As noted above there has been a gradual increase in the admission of aged persons. This should be given consideration in any study of the death rate. The number of old people admitted to the hospitals is disquieting. It should not be necessary to commit to mental hospitals so many old persons who may indeed be forgetful, but many of whom need only kindly custodial supervision.

In spite of limited capacities, there were over 500 first admissions to the three institutions for mental defectives. During the same period 119 patiente were discharged as improved, 85 as unimproved and 184 died.

At Selinsgrove, 288 patients were admitted, (seven of these being readmissions). The new hospital building has greatly extended the efficiency of the Colony. A beginning has been made in respect to school facilities for the children.

The hospitals and other institutions have been greatly hampered in

their activities by the shortage of personnel, especially in the medical, nursing, and attendant groups. As a result, a number of activities heretofore considered essential have had to be reduced or even in some instances temporarily discontinued for the duration of the war. Included among these activities are community clinics and some special forms of treatment. Undoubtedly this will be unfavorably reflected in future statistics. The faithful key officers and employees are to be commended for remaining at their posts under trying circumstances.

In these statistics, the Western State Psychiatric Hospital is included for the first time. This hospital, opened in a difficult time, has already made valuable contributions in the educational field. Extensive training programs have been established especially for medical students, physicians and affiliate nurses.

William C. Sandy, M.D.

Director, Bureau of Mental Health

COMMONWEALTH OF PENNSYLVANIA

NINTH ANNUAL STATISTICAL REPORT

of the

Department of Welfare

S. M. R. O'HARA
Secretary

1943

Bulletin No. 86 **Penal** **Section B**

Section B of the Statistical Report presents statistical tables on data received from penitentiaries, county prisons and correctional schools.

Again this year, as in 1942, there has been a decrease in commitments to State penal institutions. There is a slight increase in commitments to correctional schools. It could not be otherwise with the increase in juvenile delinquency due to war time conditions.

In all the penal institutions, inmates have been assisting in the war effort. Cadets from the Pennsylvania Industrial School at Camp Hill have been working at the New Cumberland Army Service Forces Depot.

Inasmuch as the war brought a rapid turnover in personnel it has been very difficult to maintain normal standards in operating efficiency. New employees lack experience and cannot be trained as thoroughly as in the past. The burden and responsibility on the more experienced staff is thereby increased. All are to be commended for their loyalty and devotion to duty under the stress and strain of war time conditions.

S. M. R. O'Hara

Secretary of Welfare

BUREAU OF CORRECTIONS

The Bureau of Corrections, that Division of the Department of Welfare which inspects, supervises and regulates the Penal and Correctional Institutions of the Commonwealth of Pennsylvania, herewith submits data and statistics gathered from all prisons throughout the State.

This Bureau is governed by Laws and Acts of Legislature, and the Administrative Code, and its primary duties are to inspect and regulate all institutions in the penal group, and to establish standards for physical maintenance in these institutions whereby persons who are so unfortunate as to be confined therein receive just, humane and considerate treatment.

Penal Institutions in the Commonwealth have progressed considerably in the last decade, and probably after the War a constructive building and housing program will be forthcoming to adequately meet these needs. Prisons today are not just places of detention for the safe-keeping of law violators. Special classification of each offender is made; school and trades are offered where an aptitude for such is manifested; hospitalization and surgery to correct illness which may have been the basis for crime is available; psychiatrists analyze those offenders who require mental adjustment, and special psychiatric treatment is administered; special interviews by representatives of the Bureau of Corrections give the offender the sense of having his welfare taken care of by an unbiased third party, and is also instrumental in maintaining the morale of those confined in the institution. Careful study, treatment and expenditure is made in each individual

case. In all, the offender is being rehabilitated for the time when he returns to society with a greater chance of becoming a respectable, law abiding citizen.

The charts and tables presented herein are clear, definite pictures of problems of the offender; the administration of the institution and the Department of Welfare. Space, which limits detailed explanations, will allow for a few major comparisons:

New commitments to the State Penal and Correctional Institutions were 2378 for the period ended May 31, 1942, as against 1978 for the period ended May 31, 1943. This reduction in the number of commitments is, no doubt, due to the War and Defense programs. The induction into Service and the creation of employment has eliminated idleness and the inclination to indulge in unlawful practices. The efforts of the Courts to place on probation such cases as warrent leniency and consideration have also contributed to this reduction.

There were 3348 persons discharged from the institutions for the year ended May 31, 1942, and 3012 discharged for the year ended May 31, 1943, which shows a decline in the number of cases brought before the Courts of our Commonwealth.

There were 31 less court commitments to the Pennsylvania Industrial School, Camp Hill, and the Pennsylvania Industrial School, Huntingdon, for the period ended May 31, 1943, than for the year ended May 31, 1942. This comparative table shows that the War and Defense program are reducing the potential number of prisoners to these two schools.

Commitments to the institutions by division of the types of

crime show the majority of the offenses to be Robbery, Burglary and Larceny. There is a total of 780 charges of the above three offenses, which is 39% of the total amount of commitments.

The largest group of inmate population is under the age of 21 years, and the next highest group is between 21 and 24 years of age. This may explain the chart showing the marital status of inmate population as 1416 single and 305 married. The difference, to a large extent, is due to the youth of many boys committed to the Industrial Schools.

The increase of 61 in population at the Pennsylvania Training School, Morganza, for the period ended December 31, 1942 as compared to the period December 31, 1941, is in all probability due to the fact that the present administration at the Institution is maintaining their high standards of training for the rehabilitation of boys and girls, and that the different Courts in the Western division of the State are cognizant of this splendid training program, and have shown a preference for committing delinquents to that Institution rather than to the different county institutions. A chart showing parental status of these boys and girls shows the major portion of them have both parents, which leads to the deduction that there is a great lack of parental guidance and parental responsibility in the home. The ages of this group range from 10 to 20 years.

The inmate days and average daily population of the county prisons were reduced for the year ended May 31, 1943, which reduction shows that less minor crimes were committed. Actual commitments to the county prisons for the year ended May 31, 1942

were 5737, against 4037 for the period ended May 31, 1943. This decrease is probably attributable to the War and steady employment.

Many transfers of inmates from one institution to another have been completed during the year. The majority of these transfers were made at the requests of the inmates that they may participate in the War effort. Quite a number were transferred from the Eastern State Penitentiary to the Rockview branch of the Western State Penitentiary and materially assisted in the production of food and a large number were transferred from the Pennsylvania Industrial School at Huntingdon to the Pennsylvania Industrial School at Camp Hill so they could do war work at the New Cumberland Induction Center. I might mention here that in all the State-Owned Penal Institutions, inmates have been doing their part in the War effort. It has also placed the idle prisoner in a position where he may be employed and enable him to do his time in a more useful manner.

The institutions inspected and supervised by the Bureau of Corrections are as follows:

Eastern State Penitentiary, Philadelphia; New Eastern State Penitentiary, Graterford; Western State Penitentiary, Pittsburgh; New Western State Penitentiary, Bellefonte; State Industrial Home for Women, Muncy; Pennsylvania Industrial School, Huntingdon; Pennsylvania Industrial School, Camp Hill; Pennsylvania Training School, Morganza; Allegheny County work House, Blawnox; House of Correction, Philadelphia; and 67 County Prisons and the Broadmeadows Prison Farm in Delaware County.

In addition to these institutions, 500 City, Borough and Town-

ship lock-ups come under the supervision of the Bureau of Corrections. There were formerly 651 lock-ups in this group, but because of certain standards of sanitation and physical maintenance required for the care of prisoners confined therein, many of the smaller municipalities have chosen to use a neighboring approved lock-up, or the County Prison, rather than make extensive repairs, thereby reducing the financial burden of the taxpayer.

We have endeavored to show the most significant facts in this preface to statistics, charts and graphs; however, it is not our intention to have covered all of the material set forth, and many similar comparisons could be made.

Fred W. Brady

Director

Bureau of Corrections

COMMONWEALTH OF PENNSYLVANIA

NINTH ANNUAL STATISTICAL REPORT

of the

Department of Welfare

S. M. R. O'HARA
Secretary

1943

Bulletin No. 86 General Section C

-10

Section C of the Ninth Annual Statistical Report of the Pennsylvania Department of Welfare, presents, in summary form, data assembled through the Bureaus of Institutional Management and Community Work. Statistics on the mentally ill and prisoners in State-owned and County Institutions are contained in Sections A and B respectively.

Data contained herein is essential for constant reference and guidance in developing the policies of the Department of Welfare, in general, and particularly in supervision, operation, and analysis of institutional management functions; dietary, nursing, engineering, farm, architectural and laundry.

In similar fashion, the functions of the Bureau of Community Work are analyzed and policies and programs developed in the light of records and conclusions to be drawn therefrom.

For the first time, this report presents charts and interesting information relating to the services provided by the Child Guidance Center, which is a part of the Rural Extension Unit under the Bureau of Community Work. The far-reaching program of children under care, supervision of County Homes, and State-aided Hospitals is of interest to the large majority of citizens of this Commonwealth.

The information embodied in this report, therefore, is not only necessary for the Department of Welfare but will also be of interest to others having institutional problems or those who are engaged in research or instruction programs related to government and the social structure.

S.M.R. O'Hara
Secretary of Welfare

WHERE THE WELFARE DOLLARS GO

BUREAU OF INSTITUTIONAL MANAGEMENT

The Bureau of Institutional Management is responsible to the Commonwealth and thirty-seven State-Owned institutions for developing and supervising a program providing food, clothing, light, water, heat, farm products and general maintenance. Standards for goals of performance are promoted. Key employees are called together for conferences on important problems. Monthly summaries of data reflecting efficiency of the food, laundry, hospital, farm and engineering service records are issued to institutions.

Dietary

Tables I and II show the ration or the daily per capita food requirements which have been estimated for the different types of institutions for a period of one year. This ration has been based on the essentials of a low cost adequate diet. It is used as a yardstick in judging the adequacy of the institutional food consumption. It is also used as a guide in planning the production of the institutional farms and in the purchase of perishable foods to supplement such production, as well as in the purchase of staple foodstuffs.

The variation as to the performance of the different institutions is attributed to factors such as weather and soil conditions; physical conditions within the institutions such as canning, storage and preparation facilities, and number of personnel as well as psychological and budgetary factors. Quality, variety and economy are stressed and every attempt is made to insure adequate food consumption and satisfaction for both patients and

The decrease in consumption of certain foods reflects the result of rationing and, in many cases, the unavailability of certain foods. A comparison of the median figures for 1942-43 with those of 1941-42 show a decrease in the consumption of meat, butter, milk, sugar, and a slight increase in legumes and farinaceous foods. There has been an average decrease in food consumption of 3 ounces per person per day with about .013 cents per person per day increase in cost. It is of interest to note that the food costs in 1942-43 did not increase to the same extent that they did in 1941-42.

The personnel with the dietary departments is headed in most institutions by a trained and experienced dietitian. The ratio of personnel to that of meals served varies considerably. A ratio of 1 dietitian to every 750 people served would probably meet most of the acute needs. The ratio of 1 dietary employee to every 60 people served is probably fairly satisfactory where patients are available in the various dietary functions. A centralized food preparation and service department usually requires less personnel than where a large number of preparation and service units are maintained. Frequently other departments, such as nursing, over-lap in the responsibility of the food service, thereby reflecting a lower number of personnel in the dietary department. There is always some over-lapping of this function but it is usually considered better organization to change an employee who is actively engaged in dietary duties to the dietary department rather than to another department.

The ratio of personnel shows only the number of positions set up but does not show the number of vacancies or the extent of turnover of dietary personnel. In each case, the number is high. The service rendered has in many cases suffered.

Table III indicates the trend in prices of certain type foods for a period of five years. The figures given were obtained from the prices submitted from nineteen institutions including mental hospitals, schools for mental defectives, and penal and correctional institutions.

Farms

Institutional farms are maintained in connection with twenty-four institutions. A total of 31,026 acres are included in these farms, about 14,602 acres of which are tilled. The returns to the institution include, in order of importance, protection, wholesome work opportunity, and a better quality of food at less cost than could be purchased from budgets available.

Table VI shows the acreage, total and tilled, at each institution. A definite plan obtains for each acre. This plan is based on the policy that the following products, in order, should be produced as needed to the extent that land and other facilities are available: vegetables, potatoes, crops to support dairy, piggery, hennery and other livestock. After such tilled crops are provided for, the remaining acreage is planned and maintained for pastures and woodlots.

Employment of patients or inmates is also shown. A total of 1891 persons are employed regularly in farm activities, with the

larger proportion working with general farm crops and in gardens. This number is greatly increased at times during the Summer and Fall seasons when vegetables, potatoes or fruits are being harvested. The varied opportunity thus presented to the medical staff at the several institutions in placing mental patients is of great value. A comparable value toward rehabilitation is obtained at the penal and correctional institutions. At Rockview, alone, upwards of 300 prisoners are employed in farm activities regularly.

Table VII shows the milk production per cow, egg production per hen, and the crop index for 1929 as compared with 1943, It will be noted that the efficiency of production per cow is one-sixth higher in 1943 than in 1929. This makes possible a very considerable economy in production. The increase of 11,000,000 pounds on milk contributes to a much better diet at a considerable saving in cost over that of purchased milk. The saving alone would be estimated as at least $125,000 per year.

A similar economy is represented in the 60% increase in eggs produced per hen in 1943 as compared with 1929. It will be noted that the total production of eggs is more than five times that of 1929. This is partly due to the fact that nineteen institutions were maintaining a hennery in 1942-43 as compared with thirteen in the year 1928-29, but to an even greater degree it is due to the increased efficiency of production.

The crop index figure as indicated reflects a comparison between institutional yields of farm crops and those of individual farms in the same counties. It is gratifying to note that from

1929 to 1943 institutional crop yields trended upward--from 12% above the average for private farms to 42%. The goal set in 1928 was 50% increase over average farm yields.

It will be noted that in Table IX at the penal and correctional institutions one paid employee only is listed for the livestock activities except for one institution, and also for the garden activities except for two institutions. A number of paid employees are necessary for mental institutions. This is true because of the use of mental patients. While it is highly advantageous to give patients opportunity for wholesome exercise and work, their use entails a considerable responsibility which can be met only by trained employees. Population, tilled land, and number of livestock, are some of the factors deciding the number of paid employees on farm crops and livestock activities. Cost per capita per day includes salaries, seed, feed--in fact, all items charged to the several activities.

Laundry

Laundry Table V compares the average results of the first five test bundles with those of the 28th bundle. The last was one of four test bundles checking quality of work done in institutional laundries during the fiscal year ending May 31, 1943. It will be noted that the reports record the percentage of breaking strength loss, retention of white color, and soil removal. Marked improvement is evident in all three factors. Service and information secured through a connection with the Ellen H. Richards Institute of the Pennsylvania State College are important factors in developing and maintaining the improvement indicated. The ser-

vice mentioned is shared with State-Owned institutions operating under the Departments of Public Instruction, Health and Military Affairs.

In Table IV laundry data is shown relative to the volume of soiled goods, employees--patients and others--and costs per pound. The rather formidable total poundage of soiled goods amounts to over 42,000,000 pounds for the year. More than 60% of this total passes through the laundries of the mental hospitals. The highest per capita, is, of course, found in the medical and surgical hospitals. By groups as to per capita load the other institutions range in the following order: mental hospitals, feebleminded and epileptic, and penal and correctional institutions.

The per capita poundage of soiled goods for the different groups of institutions reflect the type of patients and inmates, as well as the care required for the varying groups. The figure is lowest for those in the penal and correctional institutions and highest for the medical and surgical hospitals.

Work opportunity is found in the penal and correctional, mental and feebleminded and epileptic institutional laundry program for a total of 1330 inmates and patients. Institutional administrators welcome varied opportunity for employment. Efficiency is usually not a characteristic of such employees, if they can be termed such, but due to a rehabilitative or therapeutic program which exausts all opportunities for wholesome work, and to restricted budgets preventing a full quota of paid employees, the work accomplished by inmates and patients is important.

Washing costs include all soaps and detergents, while gross costs include this group and in addition repairs, salaries, and other items. Though the gross cost at medical and surgical hospitals is slightly over .014 per pound, the average for all institutions is .0068.

Engineering

The engineering activities cover the various utilities used in conjunction with the operation of the institutions and the maintenance programs that affect the continuity of each of the utilities together with the care of the physical property.

Table VIII covers the annual costs for the purchase of the basic maintenance materials and utilities. The purchase of coal is the largest single item. The purchase of electricity represents approximately 50% of the electricity that is actually used at State institutions; the cost of electricity for the 1943 period being a slightly higher average per KWH than the previous year 1942. The increase of approximately 10% in the purchase of electricity being due to the discontinuance of generation at the Philadelphia State Hospital during the month of March 1943. The purchase of water represents approximately 1/6 of the water that is used at the institutions.

During the past year additional utility loads have been placed upon the institutions due to the fact that buildings that were constructed under the General State Authority Program have now been put in use. This, together with the additional population, justifies the increase in the cost of utilities consumed.

Hospital Service

An analysis of Hospital Service of the ten State-Owned

Medical and Surgical Hospitals is shown in Table . In making a comparison between this report and that of last year, it will be found that the population and the amount of laboratory work done in these hospitals is practically the same. However, reports indicate that there has been an increased attendance at the out-patient clinic of more than 11,000 visits. This may be partly due to greater accuracy in reporting to the Department.

Nursing Education

Table XI shows the number of students who have completed the three year course in nursing conducted at four general hospitals and one mental hospital. Foundations have been laid at the Scranton State Hospital for an accelerated program as recommended by the National League of Nursing Education in cooperation with the National Council for War Service. The Western State Psychiatric Hospital, in cooperation with the University of Pittsburgh, established a course in Psychiatric Nursing for basic professional students and affiliating students. The demand for psychiatric Nursing affiliation has greatly increased. Table XI shows the hospitals participating in this program and gives the number of students completing the course.

Course for Attendants

Table XI. Courses approved by the Department of Public Instruction for attendant training for men and women have been carried on over a period of years at the Harrisburg and Wernersville State Hospitals. Owing to the lack of adequate personnel for supervision, it was necessary temporarily to discontinue the course given at the Wernersville State Hospital the latter part of the year.

Contribution to the War Effort

Included in these activities and related to the nursing program are--

Red Cross Volunteer Nurses Aides
Red Cross First Aid Courses
Red Cross Home Nursing Courses
Plasma Banks
Base Hospitals and Casualty Hospital Assignments

Miscellaneous

In the general hospitals, personnel in key positions was difficult to maintain due to the demand of the Military Service. However, it was in the mental hospitals that the nursing service suffered most keenly because of the ever increasing number of vacancies in the nursing and attendant positions. Added to this was the problem of securing adequate necessary supplies of bed linen and clothing.

Early in the year, the status of the medical staff of the Hazleton State Hospital was changed from a closed staff to an open staff including obstetrics, medical, and medical specialties. This no doubt will lead to greater stimulation and interest of the physicians of the community, and extend to the general public.

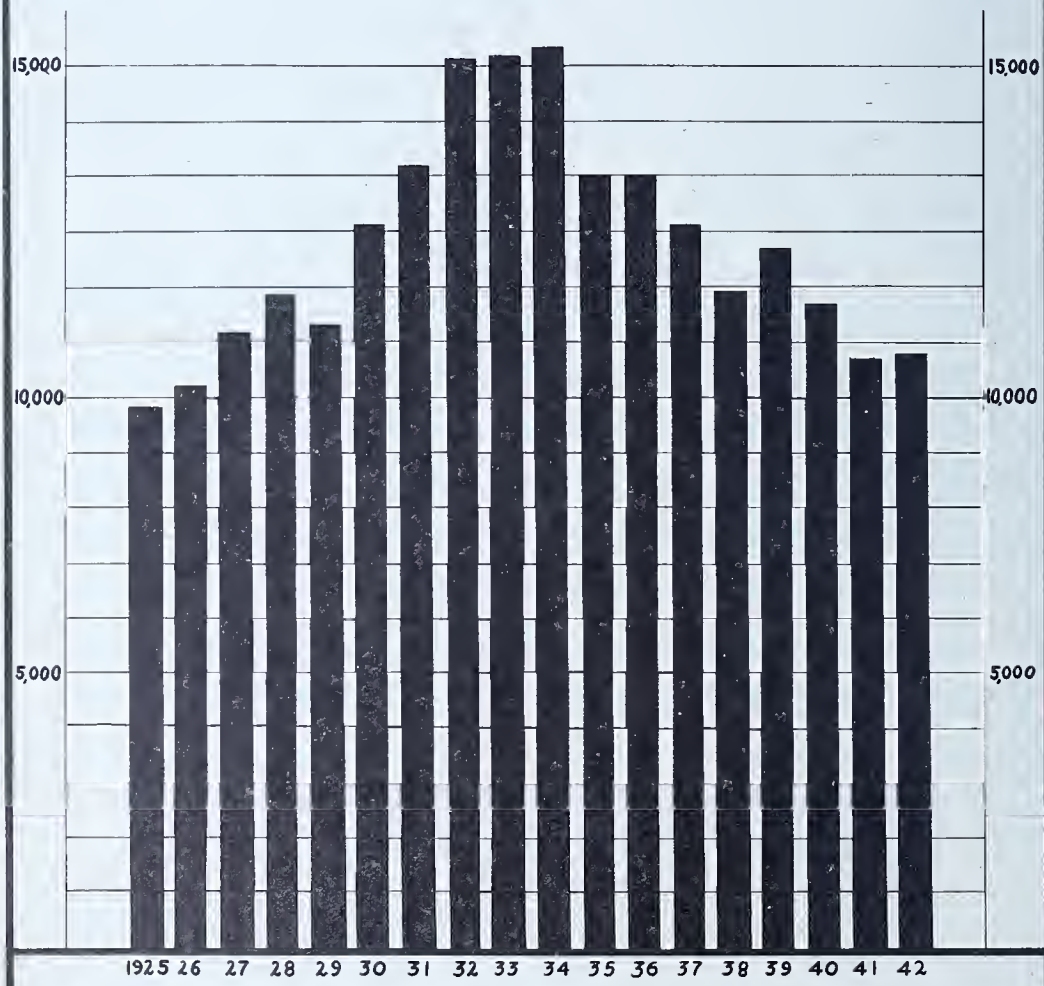
COUNTY HOMES

POPULATION DEC. 31

1925 - 1942



BUREAU OF COMMUNITY WORK

Under the Administrative Code of Pennsylvania, the Department of Welfare and specifically the Bureau of Community Work, assumes the responsibility for supervisory and consultation service of all State-aided hospitals, maternity homes and hospitals, homes for the aged and indigent, hospitals for crippled children (exclusive of State Hospital for Crippled Children) county homes, agencies and institutions responsible for dependent, delinquent and neglected children away from home.

The Bureau is responsible for the establishment and enforcement of standards, which will insure proper care, comfort and health to those who come under their supervision or are in need of custodial or institutional environment.

Under the Bureau's supervision, four divisions function in various fields of activity: (1) Homes and Hospitals; (2) Family and Child Welfare; (3) Rural Child Welfare Unit; and (4) the administration of the Solicitation Act.

It is obvious that in order to secure effective supervision, the cooperation of the various communities of this Commonwealth is an essential factor. The mutual exchange of experience, which will naturally follow, will be reflected in better care and well being for children and adults needing help, succor, guidance and rehabilitation.

The impact of the present war has and will augment considerably the responsibility that must be assumed and exercised if a real goal of attainment is to be our objective.

It is encumbent and vitally necessary, however, for cooperation and coordination of many groups, aside from child welfare agencies, if intelligent and worthwhile service is to be attained.

It has been well and truly said "that our nation must go forward

on the feet of little children as the future of America will be determined by the health, training and general well being of those who will, in the near future, be the citizens of tomorrow".

County Home Population

Tables on admissions to County Homes in 1942 show a decided decrease. In 1941 there were 7047 persons admitted while in 1942 there were only 5791 admissions, or a difference of 1256. This decrease is reflected in all ages under 60 years. The obvious conclusion is that because of war conditions and employment, men and women have been able to secure employment and support themselves.

Children's Census

The tables contained in this year's report are identical with those of previous years. Comparison with tables for the year ended December 31, 1941, shows little change in the number of children under care the end of the year. There were 40,228 children reported as remaining under care on December 31, 1942 and 39,478 on December 31, 1941 but this difference is in part due to the fact that in 1942 - 319 organizations and agencies reported while in 1941, only 313 reported.

Rural Child Welfare

The children's census includes the dependent and neglected children under the supervision of the program of Child Welfare Services which operates in 14 counties. On December 31, 1942 these counties reported 1116 children in foster homes; 436 with parents or relatives under supervision; and 356 in institutions for dependent children or for children with special needs, making a total of 1903.

In addition to the children cared for through the 14 county programs of public child care, Child Welfare Services includes a child guidance service which is described in the following introduction to the accompanying tables:

TRI-COUNTY CHILD GUIDANCE CENTER

The service provided by the Child Guidance Center is psychiatric, psychological, diagnostic, or consultation for children who are presenting behavior symptoms of some form of maladjustment. The four areas of service are actually varying degrees of a consideration and study of children from the physical, emotional, intellectual, and environmental aspects, in order to determine their particular needs and to provide direct or indirect help in meeting these. The scope and degree of service given depends upon the extent of the child's need, his own ability to make use of the service, and ability of the adult responsible for him to participate in this.

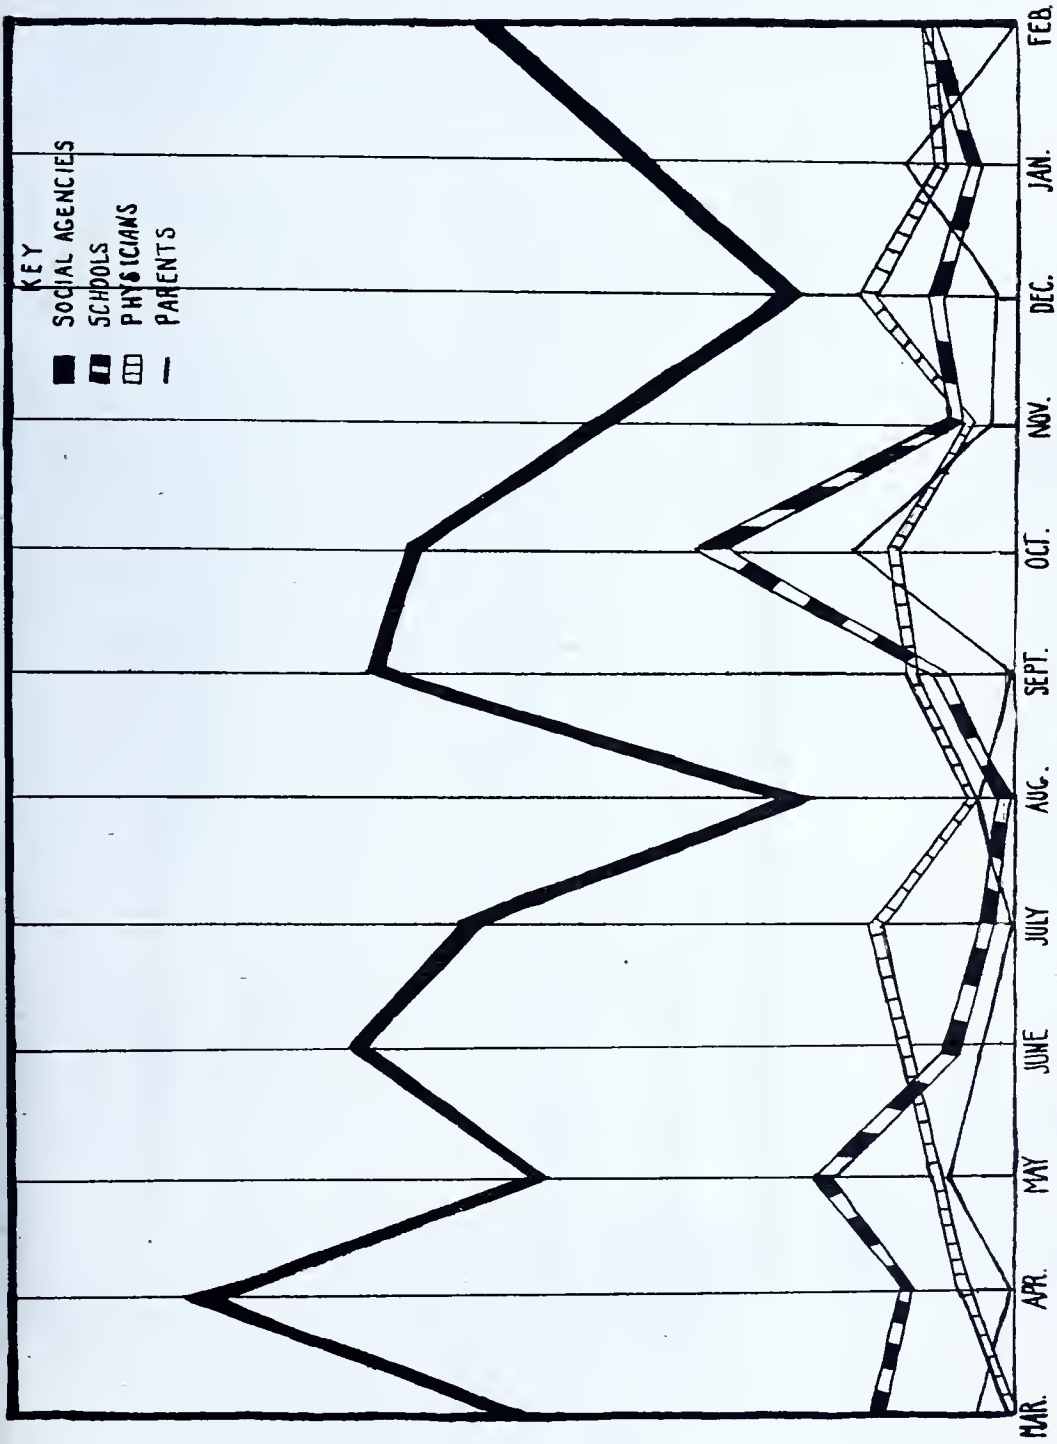
In those instances where the child's difficulty has an emotional basis, the child himself must have the direct help of psychiatric treatment in order to make an adjustment within himself. In addition, he needs from adults, - parents, foster parents, agency workers, school teachers, - an understanding of his particular needs and the provision of a satisfactory environment. In this phase of the Center's service, the child and parent or substitute parent come each week for an average of four months. The Therapist in his interviews with the child gives the child a controlled sample of living through the medium of play. By the therapist's balanced use of freedom and limits, as the individual child needs them, the child is given help in learning what capacities he has, how to use them, and how to get along with other people. While the child is seen by the therapist, the parent or substitute parent is seen by the psychiatric social worker. In this contact the responsible adult learns more about the child through a discussion of what has occurred in the child's contact with the therapist and by relating this to what has happened to the child at home, at school, and in all of his relationships with other people.

In other instances a child may deviate from the average in some respect. He may have less or more than average ability or certain personality characteristics resulting from encephalitis or epilepsy. In such cases the child himself may not be in as much need of psychiatric treatment as of a great degree of understanding from parents or other responsible adults. The service of psychological and diagnostic studies may be of assistance in meeting this need through the study of the child himself and through the specific discussion of this study with the parent or responsible adult. The psychological study involves the determination of a child's ability through, first, the establishment of a satisfactory relationship between the psychologist and the child, and secondly, through the administration of a wide variety of tests indicating the child's general and specific abilities, his approach and attitude in performance. In the diagnostic study, there is a period of physhological study plus one to three interviews with the psychiatrist in which physical, emotional and neurological aspects are considered.

In the service of consultation, only the adult is seen. A parent or agency worker may come to the Center for a general discussion of a child in relation to his environment with the possibility of making different plans for the child or of service at the Center at a later time. In some such instances it is apparent that the child's environment is unusually good from physical and economic standards but it may not be providing the stimulus required by a very withdrawn child or the limits and control required by a very aggressive child.

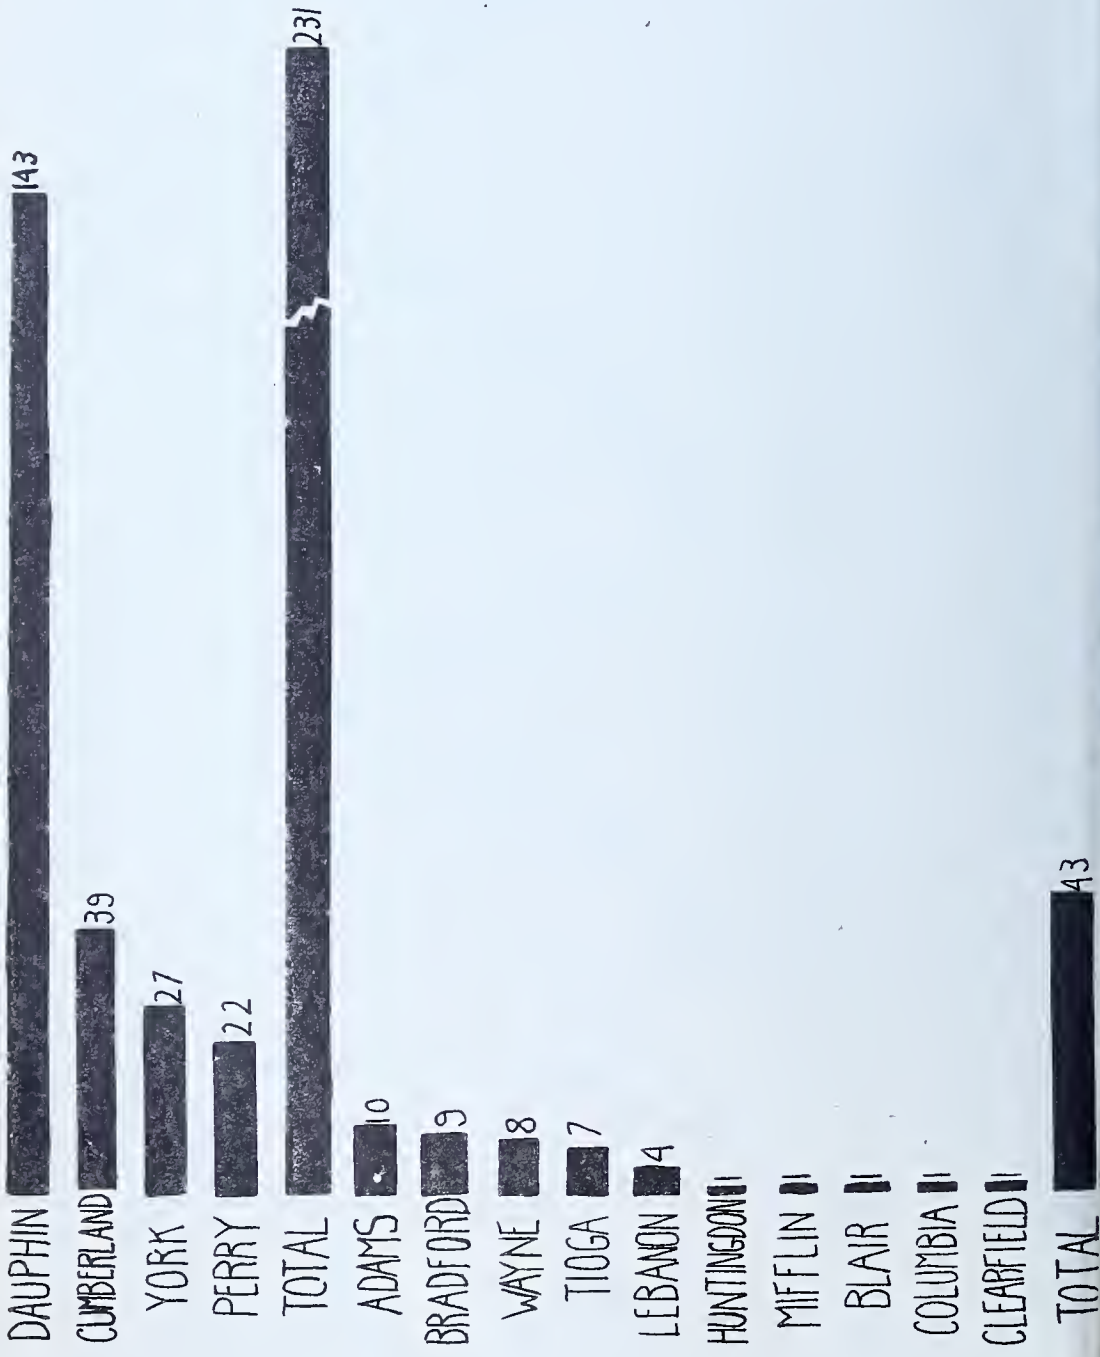
NUMBER OF CASES BY REFERRAL SOURCES

This chart represents people or individuals who gave information to parents concerning the Center or who suggested to parents their use of the Center. In every instance where the child is in his own home, the parent makes his own application although he may have obtained information concerning the Center from a teacher, doctor, lawyer, social agency, etc. There is, however, very frequently an additional contact with the referral source. It will be noted that by far the largest source of referrals is social agencies which term is used broadly for this chart to include Y.M.C.A.'s, Y.W.C.A.'s, probation offices, hospital social service, health organizations, etc. Referrals by physicians maintains a fairly stationary level, whereas referrals by schools reflects in its peaks the various periods in the school year. The graph showing referrals by parents who have come to the Center themselves is a particularly important one inasmuch as it represents the readiness of those who have received service themselves to refer others. This has been a gradually increasing number.



GEOGRAPHICAL DISTRIBUTION OF CASES

The Center was established to serve the three counties of Dauphin, Cumberland, and Perry. Since that time, on the basis of requests from a much wider area and the lack of child guidance clinic facilities in that area, the policy has been changed. The Center now accepts any referral from any area that is not covered by a child guidance clinic and from which the parent or agency finds transportation possible. Because of the number of referrals from York and the fairly satisfactory transportation facilities, as well as the interest of that county in obtaining service from the Center, York has now been included as a fourth county to comprise the primary area of service. It will be noted that 231 new cases came from Dauphin, Cumberland, York, and Perry Counties in the year, March 1, 1943 to February 29, 1944. In addition, there were 43 cases from 10 more distant counties during that same period. With many of those counties, distance and transportation difficulties make extensive service impossible. However, in acute situations where service is badly needed, the Center is available. The figures on this chart relate only to those cases that came to the Center for the first time after March 1, 1943. The total is less than the total of 356 given for service classifications because the latter figure included those cases which were in the process of receiving service on March 1, 1943.



CASES BY SERVICE CLASSIFICATION AND NUMBER OF INTERVIEWS

This comparative study of the number of cases in each service classification with the number of interviews in connection with each of these classifications, gives a picture of the changes in volume of work from year to year in terms of number of cases and also number of interviews. It will be noted that the total number of cases in the years 1942-43 and 1943-44 is not the same as the total of the four services. The difference is composed of the number of cases which had not gone beyond the point of one or two application interviews with parents or referring persons. Many of these are cases on which further service has been given when staff time permitted. It will be noted that the total number of interviews in 1943-44 had decreased nearly 200 from the year 1942-43 and also that the number of treatment cases had decreased from 74 to 59, whereas, the total number of cases had increased from 305 to 356. The increase in the total number of cases indicates an increase in requests for service from the Center while decrease in the number of interviews indicates the decrease in staff time due to the Psychiatrist's work on the Induction Board and the vacancy in the position of Assistant Social Worker. It will be noted further that the decrease in number of interviews occurs in connection with treatment cases which require a much greater degree of staff time in service per case. The average number of interviews per treatment case is 17, psychological study is 5, diagnostic study is 7, and a consultation is 2.
